Overview:

Below are the steps for adding a network drive to your Mac.

Before You Begin:

Before starting, check to be sure the correct DNS Suffixes are listed under the adapter settings. To do this,

1. Click on the wireless icon in the top right corner and click Open Network Preferences.

2. Click Advanced.
3. Click on the **DNS** tab and if **wvu.edu** and **wvu-ad.wvu.edu** are not already there, add them in that order so it looks exactly like it does below.

![DNS Configuration](image1.png)

**How To Add the Network Drive:**

1. Click **Go** on the menu bar and click **Connect to Server**.

![Finder Menu](image2.png)
2. Type in the server address to which you are trying to connect:
   - The N drive will be “smb://wvu-ad.wvu.edu/Data”
   - The J drive will be “smb://wvu-ad.wvu.edu/Home/UserHome” or “smb://wvu-ad.wvu.edu/Home/UserHome2”

3. Click the + sign to add this server to the favorite servers and then select the server you want to connect to.
